NM13 - Mobile charger

Type designation: **NM13**
NSN: **6130160022119**
PN (RN): **7004.000.01**
KČN: **0299012006917**

Set consists of NM13 mobile charger and documentation. For basic operation no other components are required. The charger is used for charging of the single battery pack RF13.1 by a constant current. This charger makes possible the charging of the battery pack at mobile sets by means of an on-board mains of 12 V or 24 V. Temperature increase of the battery pack above +43 °C causes the standard charging current switch-off and consequently the trickle charge mode is switched on. The chargers can be fixed to horizontal or vertical surfaces with four M4 screws. They are connected to the on-board mains by means of a power cable with a cigarette lighter adapter, which is included with the charger. The battery pack is fastened to the charger with a lever closure. The charging stops automatically. For more details see the device page.
